Appendix : II

M.A./Sc. (FINAL) MATHEMATICS – 2018-2019 AND ONWARDS

Scheme of Examination : Annual Scheme

- Note: 1. Papers I and II are compulsory
2. Candidates are required to opt any three papers from Paper III to XIII

COMPULSORY PAPERS

Paper – I: Analysis and Advanced Calculus

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Complete metric space, Baires theorem, compact sets and compact spaces, connected metric spaces. Normed linear spaces. Quotient space of normed linear spaces and its completeness. Banach spaces and examples. Bounded linear transformations. Normed linear space of bounded linear transformations. Weak convergence of a sequence of bounded linear transformations. Equivalent norms.

Unit 2: Basic properties of finite dimensional normed linear spaces and compactness. Reisz Lemma. Multilinear mapping. Open mapping theorem. Closed graph theorem. Uniform boundness theorem. Continuous linear functionals. Hahn-Banach theorem and its consequences. Embedding and Reflexivity of normed spaces. Dual spaces with examples.

Unit 3: Inner product spaces. Hilbert space and its properties. Orthogonality and Functionals in Hilbert Spaces. Phythagorean theorem, Projection theorem, Orthonormal sets, Bessel's inequality, Complete orthonormal sets, Parseval's identity, Structure of a Hilbert space, Riesz representation theorem, Reflexivity of Hilbert spaces. Adjoint of an operator on a Hilbert space. Self-adjoint, Positive, Normal and Unitary operators and their properties.

Unit 4: Projection on a Hilbert space. Invariance. Reducibility. Orthogonal projections. Eigen values and eigen vectors of an operator. Spectrum of an operator. Spectral theorem. Derivatives of a continuous map from an open subset of Banach space to a

प्रमारी अधिकारी
अकादमिक-प्रथम

Banach space, Rules of derivation, Derivative of a composite, Directional derivative, Mean value theorem and its applications, Partial derivatives and Jacobian Matrix.

Unit 5: Continuously differentiable maps, Higher derivatives, Taylor's formula, Inverse function theorem, Implicit function theorem, Step function, Regulated function, primitives and integrals, Differentiation under the integral sign, Riemann integral of function of real variable with values in normed linear space, Existence and uniqueness of solutions of ordinary differential equation of the type $x' = f(t, x)$.

Paper II VISCOUS FLUID DYNAMICS

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Viscosity, Analysis of stress and rate of strain, Stoke's law of friction, Thermal conductivity and generalized law of heat conduction, Equations of state and continuity, Navier-Stokes equations of motion, Vorticity and circulation, Dynamical similarity, Inspection and dimensional analysis, Buckingham theorem and its application, Non-dimensional parameters and their physical importance : Reynolds number, Froude number, Mach number, Prandtl number, Eckart number, Grashoff number, Brinkmann number, Non-dimensional coefficients : Lift and drag coefficients, Skin friction, Nusselt number, Recovery factor.

Unit 2 : Exact solutions of Navier - Stokes equations, Velocity distribution for plane Couette flow, Plane Poiseuille flow, Generalized plane Couette flow, Hagen- Poiseuille flow, Flow in tubes of uniform cross-sections, Flow between two concentric rotating cylinders.

Unit 3 : Stagnation point flows : Hiemenz flow, Homann flow. Flow due to rotating disc, Concept of unsteady flow, Flow due to plane wall suddenly set in the motion (Stokes' first problem), Flow due to an oscillating plane wall (Stokes' second problem), Starting flow in plane Couette motion, Suction/injection through porous wall.

Unit 4 : Equation of energy, Temperature distribution : Between parallel plates, in a pipe, between two concentric rotating cylinders, variable viscosity plane Couette flow, temperature distribution of plane Couette flow with transpiration cooling.

7/1 - श्री शिव
कृष्ण

श्री शिव
प्रमारी अधिकारी
अकादमिक-प्रथम

Unit 5 : Theory of very slow motion: Stokes' and Oseen's flows past a sphere, Concept of boundary layer, Derivation of velocity and thermal boundary equations in two-dimensional flow. Boundary layer on flat plate (Balsius-Topfer solution), Simple solution of thermal boundary layer equation for $Pr = 1$.

OPTIONAL PAPERS

Candidates are required to opt any three papers given below:

Paper – III: Continuum Mechanics

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Cartesian Tensors, Index notation and transformation laws of Cartesian tensors. Addition, Subtraction and Multiplication of cartesian tensors, Gradient of a scalar function, Divergence of a vector function and Curl of a vector function using the index notation. δ - δ identity. Conservative vector field and concept of a scalar potential function. Stokes, Gauss and Green's theorems.

Unit 2: Continuum approach, Classification of continuous media, Body forces and surface forces. Components of stress tensor, Force and Moment equations of equilibrium. Transformation law of stress tensor. Stress quadric. Principal stress and principal axes. Stress invariants and stress deviator. Maximum shearing stress.

Unit 3: Lagrangian and Eulerian description of deformation of flow. Comoving derivative, Velocity and Acceleration. Continuity equation. Strain tensors. Linear rotation tensor and rotation vector, Analysis of relative displacements. Geometrical meaning of the components of the linear strain tensor, Properties of linear strain tensors. Principal axes, Theory of linear strain. Linear strain components. Rate of strain tensors. The vorticity tensor. Rate of rotation vector and vorticity, Properties of the rate of strain tensor, Rate of cubical dilation,

Unit 4: Law of conservation of mass and Eulerian continuity equation. Reynolds transport theorem. Momentum integral theorem and equation of motion. Kinetic equation of state. First and the second law of thermodynamics and dissipation function. Applications (Linear elasticity and Fluids) – Assumptions and basic equations. Generalized Hook's law for an isotropic homogeneous solid.

→ sh.
61-507

अभि
अस

प्रभारी अधिकारी
अकादमिक-प्रथम

Unit 5: Compatibility equations (Beltrami-Michell equations). Classification of types of problems in linear elasticity. Principle of superposition, Strain energy function, Uniqueness theorem, p - p relationship and work kinetic energy equation, Irrotational flow and Velocity potential, Kinetic equation of state and first law of Thermodynamics. Equation of continuity. Equations of motion. Vorticity-stream surfaces for inviscid flow, Bernoulli's equations. Irrotational flow and velocity potential. Similarity parameters of fluid flow.

Paper – IV: Boundary Layer Theory

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Derivation of boundary layer equations for two-dimensional flow. Boundary layer along a flat plate (Blasius-Topfer solution). Characteristic boundary layer parameters. Similar solutions. Exact solution of the steady state boundary layer equations in two-dimensional flow. Flow past a wedge. Flow along the wall of a convergent channel. Boundary layer separation. Flow past a symmetrically placed cylinder (Blasius series solution). Gortler new series method.

Unit 2: Plane free jet, Circular jet, Plane wall jet. Prandtl-Mises transformation and its application of plane free jet. Axially symmetrical boundary layers on bodies at rest. Boundary layers on a body of revolution. Mangler's transformation.

Unit 3: Three-dimensional boundary layers – Boundary layer flow on yawed cylinder. Growth of three-dimensional boundary layer on a rotating disc impulsively set in motion. Unsteady boundary layers – Method of successive approximations, Boundary layer growth after impulsive start of motion and in accelerated motion, Boundary layer for periodic flow (Pulsatile pressure gradient).

Unit 4: Approximate methods for the solution of the boundary layer equations. Karman momentum integral equation. Karman-Pohlhausen method and its application. Waltz-Thwaites method. Energy integral equation. Derivation of two-dimensional thermal boundary layer equation for flow over a plane wall

Unit 5: Forced convection in a laminar boundary layer on a flat plate, Crocco's first and second integrals. Reynolds analogy. Temperature distribution in the spread of a jet – (i) Plane free jet, (ii) Circular jet (iii) Plane wall jet. Free convection from a heated vertical plate. Thermal-energy integral equation. Approximate solution of the Pohlhausen's problem of free convection from a heated vertical plate.

Handwritten signatures and initials in blue ink, including "AOS" and other illegible marks.

Paper – V: Mathematical Programming**Teaching : 6 Hours per Week****Examination : Common for Regular/Non-collegiate Candidates****3 Hrs. duration****Theory Paper****Max. Marks 100**

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Separating and supporting hyperplane theorems. Revised Simplex method for linear programming problem (LPP), Bounded variable problem. Convex function.

Unit 2: Integer programming. Gomory's algorithm for the all integer programming problem, Branch and Bound technique. Quadratic forms. Lagrange function and multiplier.

Unit 3: Non-linear programming problem (NLPP) and its fundamental ingredients, Necessary and Sufficient conditions for saddle points. Kuhn-Tucker theorem. Convex separable programming algorithm.

Unit 4: Kuhn-Tucker conditions for optimization for NLPP. Quadratic Programming, Wolf's method. Beale's method. Duality in quadratic Programming.

Unit 5: Dynamic programming, Principle of optimality due to Bellman, Solution of a LPP by dynamic programming.

Paper – VI: Mathematical Theory of Statistics**Teaching : 6 Hours per Week****Examination : Common for Regular/Non-collegiate Candidates****3 Hrs. duration****Theory Paper****Max. Marks 100**

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Sample space -Combination of events. Statistical independence, Conditional probability. Bay's repeated trials. Random variable, Distribution function, Probability function. Density function, Mathematical expectation, Generating function, Continuous probability distribution, Characteristic function. Fourier's inversion, Chebyshev and Kolmogorova inequality. Weak and strong laws of large numbers.

प्रभारी अधिकारी
अकादमिक-प्रथम

28/11/19
28/11/19

Unit 2: Normal, hypergeometric, rectangular, Negative Binomial Beta, Gamma and Cauchy's distribution. Methods of least squares and curve fitting, Correlation and Regression coefficients, Association of Attributes.

Unit 3: Interpolation- Introduction, Newton-Gregory theorem. Newton's, Lagrange's, Gauss's and Stirling's formulae.

Index numbers- Introduction, Price relatives, Quantity relatives, Value relatives, Link and Chain relatives. Aggregate methods, Fisher's ideal Index. Change of the base of the index numbers. Elementary sampling theory. Distribution of means of samples for Binomial, Cauchy, rectangular and normal population. Exact distributions of χ^2 , t, z and F. Statistics in samples from a normal population, their simple properties and applications.

Unit 4: Test of significance and difference between two means and two standard deviations for large samples with modification for small samples and taken from normal population. Analysis of variance, Simple cases (One criteria and two criteria of classification).

Unit 5: Elementary Statistical theory of Estimation of efficient, Fisher's criteria for the estimator, Consistent, Efficient and Sufficient estimator, Method of maximum likelihood. Maximum Likelihood Estimator, Other methods of estimation. Methods of moments, Minimum variance, Minimum Chi-square and Least Squares.

Paper – VII: Combinatorics and Graph Theory

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Combinatorics- Counting of sets and multisets. Binomial and multinomial numbers. Unordered selection with repetitions, Selection without repetition. Counting objects and functions. Functions and the Pigeonhole principle. Inclusion and exclusion principle.

Unit 2: Discrete numeric functions and combinatorial problems. Generating functions and recursions. Power series and their algebraic properties. Homogeneous and non-homogeneous linear recursions.

Unit 3: Graphs- Basic terminology, Simple graphs, Multi graphs and Weighted graphs. Walk and connectedness. Paths and circuits. Shortest path in weighted graphs, Eulerian paths and circuits. Hamiltonian paths and circuits

Handwritten signatures and initials in the bottom left corner.

Handwritten signature and printed text: प्रभारी अधिकारी अकादमिक-प्रथम

Traveling salesman problem, operations on graphs. Trees- Trees, Rooted trees, Paths lengths in rooted trees, spanning trees, minimum spanning trees.

Unit 4: Cut sets- Cut-sets, Cut vertices, Fundamental cut sets, Connectivity and separativity. Net work flows, Max-flow min-cut theorem.

Planar Graphs- Combinatorial and geometric graphs, Kuratowski's graphs. Euler's formula. Detection of planarity. Geometric dual. Thickness and Crossing number.

Unit 5: Graph Colouring. Vertex colouring, Edge colouring and Map colouring. Chromatic number. Chromatic polynomials, The four and five colour theorems. Digraphs- binary relations, Directed graphs and Directed trees, Arborescence, Polish notation method, Tournaments.

Counting of Labeled Trees- Cayley's theorem. Counting methods, Polya's theory.

Paper- VIII: Integral Transforms and Integral Equations

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Laplace transform- Definition and its properties. Rules of manipulation. Laplace transform of derivatives and integrals. Properties of inverse Laplace transform. Convolution theorem. Complex inversion formula.

Unit 2: Fourier transform - Definition and properties of Fourier sine, cosine and complex transforms. Convolution theorem. Inversion theorems. Fourier transform of derivatives. Mellin transform- Definition and elementary properties. Mellin transforms of derivatives and integrals. Inversion theorem. Convolution theorem.

Unit 3: Infinite Hankel transform- Definition and elementary properties. Hankel transform of derivatives. Inversion theorem. Parseval Theorem.

Solution of ordinary differential equations with constant and variable coefficients by Laplace transform. Application to the solution of Simple boundary value problems by Laplace, Fourier and infinite Hankel transforms.

Unit 4: Linear integral equations- Definition and classification. Conversion of initial and boundary value problems to an integral equation. Eigen values and Eigen functions. Solution of homogeneous and general Fredholm integral equations of second kind with separable kernels. Solution of Fredholm and Volterra integral equations of second kind by methods of successive substitutions and successive approximations. Resolvent kernel and its results. Conditions of uniform convergence and uniqueness of series solution.

Handwritten signature
BRSV

Handwritten signature
A. S. S.

Handwritten signature
प्रमारी अधिकारी
अकादमिक-प्रथम

Unit 5: Solution of Volterra integral equations of second kind with convolution type kernels by Laplace transform. Solution of singular integral equations by Fourier transform.

Integral equations with symmetric kernels- Orthogonal system of functions. Fundamental properties of eigen values and eigen functions for symmetric kernels. Expansion in eigen functions and bilinear form. Hilbert-Schmidt theorem. Solution of Fredholm integral equations of second kind by using Hilbert-Schmidt theorem. Classical Fredholm theory- Fredholm theorems. Solution of Fredholm integral equation of second kind by using Fredholm first theorem.

Paper- IX: Relativity and Cosmology

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Relative Character of space and time, Principle of Relativity and its postulates, Derivation of special Lorentz transformation equations, Composition of Parallel velocities, Lorentz-Fitzgerald contraction formula, Time dilation, Simultaneity, Relativistic transformation formulae for velocity, Lorentz contraction factor, Particle acceleration, Velocity of light as fundamental velocity, Relativistic aberration and its deduction to Newtonian theory.

Unit 2: Variation of mass with velocity, Equivalence of mass and energy, Transformation formulae for mass, Momentum and energy, Problems on conservation of mass, Momentum and energy, Relativistic Lagrangian and Hamiltonian, Minkowski space, Space-like, Time-like and Light-like intervals, Null cone, Relativity and Causality, Proper time, World line of a particle.

Unit 3: Principles of Equivalence and General Covariance, Geodesic postulate, Mach's principle, Newtonian approximation of equation of motion, Einstein's field equation for matter and empty space, Reduction of Einstein's field equation to Poisson's equation, Schwarzschild exterior metric, its isotropic form and singularity, Relativistic differential equation for orbit of the planet.

Unit 4: Three crucial tests in general Relativity and their detailed descriptions, Analogues of Kepler's laws in General Relativity, Trace of Einstein tensor and energy-momentum tensor for perfect fluid, proof of its expression for perfect fluid, Schwarzschild interior metric and boundary conditions, Radar Echodelay (Fourth test).

Handwritten signatures and initials in the bottom left corner.

Handwritten signature and stamp: प्रभारी अधिकारी अकादमिक-प्रथम

Unit 5: Lorentz invariance of Maxwell's equations and their tensor form, Lorentz force on charged particle, Energy-momentum tensor for electromagnetic field, Reissner-Nordstrom metric for spherically charged particle.

Cosmology - Einstein's field equation with cosmological term, static cosmological models (Einstein and de-Sitter) and their physical and geometrical properties. Red Shift in non-static form of de-Sitter line-element. Einstein-space, Hubble's law, Weyl's postulate.

Paper – X: Industrial Mathematics**Teaching : 6 Hours per Week****Examination : Common for Regular/Non-collegiate Candidates****3 Hrs. duration****Theory Paper****Max. Marks 100**

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Partial differential equations and techniques of solution. Finite difference methods for solving PDE. Application to problems of industry with special reference to Fluid Mechanics. Operational Techniques.

Unit 2: Operational Techniques. Computational procedure of Simplex method, Two-phase Simplex method, Revised Simplex method, Duality, dual simplex method.

Unit 3: Sensitivity Analysis in Linear Programming Problems, Various models of Assignment problems, alternate optimal solutions, post optimality analysis in transportation.

Unit 4: Inventory Models. EOQ models with and without shortages. EOQ models with constraints.

Unit 5: Replacement and Reliability models. Replacement of items that deteriorate, Replacement of items that fail completely.

Reliability Theory – Coherent structure, Reliability of systems of independent components, Bounds on system reliability, Shapes of the system reliability function, Motion of aging, Parametric families of life distribute with Monotone failure rate.

Paper – XI: Magnetohydrodynamics**Teaching : 6 Hours per Week****Examination : Common for Regular/Non-collegiate Candidates****3 Hrs. duration****Theory Paper****Max. Marks 100**

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts, two parts from each unit. Each part carries two marks. Ten questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Maxwell electromagnetic field equations. Constitutive equations of fluid motion, Stokes hypothesis. Maxwell stress tensor. Fundamental equations of Magneto-fluid-

Handwritten signatures and initials in the bottom left corner.

Handwritten signature and text in the bottom right corner:
प्रभारी अधिकारी
अकादमिक-प्रथम

dynamics. Magnetofluiddynamic approximations. Magnetic field equation, Frozen in fluid, Alfvén transverse waves. MHD boundary conditions. Inspection and Dimensional analysis, π -products.

Unit 2: Reynolds number, Mach number, Prandtl number, Magnetic Reynolds number, Magnetic pressure number, Hartmann number, Magnetic parameter, Magnetic Prandtl number and Nusselt number. Hartmann plane Poiseuille flow and plane Couette flow including temperature distribution. MHD flow in a tube of rectangular cross-section. MHD pipe flow. MHD flow in annular channel. MHD flow between two rotating coaxial cylinders.

Unit 3: MHD flow near a stagnation point. MHD Reyleigh's flow. MHD Stoke's flow past a sphere, MHD Oseen's flow past a sphere. MHD boundary layer flow past a flat plate in an aligned magnetic flow. Wilson's numerical solution technique.

Unit 4: MHD boundary layer flow past a flat plate in a transverse magnetic field. modified Rossow's method of solution. MHD plane free jet flow. Wave and theory of characteristics, Equation of the characteristics, Characteristic surfaces, MHD characteristic equations. MHD waves.

Unit 5: Friedriches diagrams. Dispersion relation. MHD shock waves. Generalized Hugoniot condition. Compressive nature of MHD shocks. MHD shock wave classification. MHD shock stability.

Paper- XII: Advanced Numerical Analysis

Teaching : 6 Hours per Week

Examination : Common for Regular/Non-collegiate Candidates

3 Hrs. duration

Theory Paper

Max. Marks 100

Note : This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries sixteen marks.

Unit 1: Iterative methods – Theory of iteration method, Acceleration of the convergence, Chebyshev method, Muler's method, Methods for multiple and complex roots. Newton-Raphson method for simultaneous equations, Convergence of iteration process in the case of several unknowns.

Unit 2: Solution of polynomial equations – Polynomial equation, Real and complex roots, Synthetic division, the Birge-Vieta, Bairstow and Graeffe's root squaring method. System of simultaneous Equations (Linear)- Direct method, Method of determinant, Gauss-Jordan, LU-Factorizations-Doolittle's, Crout's and Cholesky's. Partition method. Method of successive approximate-conjugate gradient and relaxation methods.

Dr. Anil Kumar
R. S. V. S. A. S. S.

प्रमारी अधिकारी
अकादमिक-प्रथम

Unit 3: Eigen value problems— Basic properties of eigen values and eigen vector, Power methods, Method for finding all eigen values of a matrix, Jacobi, Givens' and Rutishauser method. Complex eigen values.

Curve Fitting and Function Approximations – Least square error criterion. Linear regression. Polynomial fitting and other curve fittings, Approximation of functions by Taylor series and Chebyshev polynomials.

Unit 4: Numerical solution of Ordinary differential Equations – Taylor series Method, Picard method, Runge-Kutta methods upto fourth order, Multistep method (Predictor-corrector strategies), Stability analysis – Single and Multistep methods.

Unit 5: BVP's of ordinary differential Equations – Boundary value problems (BVP's), Shooting methods, Finite difference methods. Difference schemes for linear boundary value problems of the type $y'' = f(x, y)$, $y'' = f(x, y, y')$ and $y'''' = f(x, y)$.

Paper – XIII: Computer Applications

Teaching: 4 Hours per Week for Theory Paper.

Examination: For Regular candidates only.

2½ Hrs. duration

Theory Paper

Max. Marks 70

2 Hrs. duration

Practical

Max. Marks. 30

Note: This paper is divided into FIVE Units. It contains eleven questions. First question is compulsory. It contains ten parts of short answer type, two parts from each unit. Each part carries two marks. Ten big questions (question No. 2 to 11) will be set from five units taking two questions from each unit. Candidates are required to attempt five questions from these taking one question from each unit. Each question carries ten marks.

Unit 1: Computer languages, System software and application software. Windows: Graphical user interface, control panel and all features there in files and folders management. Using Accessories, Getting help, copying, moving and sharing information between programs. Setting up printer and fonts. Configuring modem.

Unit 2: Introduction to MS Word and Ms-Excel. Algorithms and flow charts. Programming languages and problem solving on computers. Programming in C++ Constants and variables.

Unit 3: Arithmetic expressions, Input-output, Conditional statements, Implementing loops in programs. Defining and manipulating arrays,

Unit 4: Processing character strings, functions. Files in C. Simple computer programming.

Practical

Teaching: 2 Hours per week

Examination: 2 Hours duration

Max. Marks: 30

Solution of linear systems – Gauss elimination, Gauss-Seidel, Eigenvalues and Eigenvectors – Power method and inverse power method, Least Squares Approximation – Fitting of straight line, parabola and cubic equation, Numerical integration – Trapezoidal and Simpson's methods, Numerical solution of differential equation – Euler's method, Fourth order Runge-Kutta method.

Distribution of Marks:

Two Practical – 10 Marks each	= 20 Marks
Practical Record	= 05 Marks
Viva-Voce	= 05 Marks
Total Marks	= 30 Marks

Note:

1. problems will be solved by using C/C++/MATLAB/SCILAB
2. Each candidate is required to appear in the Practical examination to be conducted by internal and external examiners. External examiner will be appointed by the University through BOS and internal examiner will be appointed by the Head of the Department/Principal of the College.
3. Each candidate has to prepare his/her practical record.
4. Each candidate has to pass in Theory and Practical examinations separately.
